

Security & Compliance Checklist

Reduce Risk, Protect Revenue, and Simplify Operations with BluePoint Reverse ATMs

Cash Handling Security Risks

Traditional cash operations come with serious vulnerabilities. Use this checklist to assess where your current process puts your venue at risk:

- ☐ Employees are responsible for handling and transporting cash
- ☐ Daily cash reconciliation takes over 30 minutes
- ☐ Surveillance is required at each POS station
- ☐ Drop safes and armored pickups are part of your process
- ☐ No standard protocol exists for internal cash audits
- ☐ Suspect that cash losses have occurred

If you checked 2 or more boxes, your cash system may be exposing you to unnecessary internal and external risks.

Reverse ATM Security Benefits

BluePoint Reverse ATMs are designed to remove cash from your front-of-house operations—while providing full accountability and auditability.

With Reverse ATMs, you can:

- ✓ Eliminate employee access to cash at POS
- ✓ Automatically track and log every transaction
- ✓ Accurate accounting of all sales revenue. Finally!
- ✓ Reduce insurance premiums tied to cash storage
- ✓ Avoid the need for armored pickups, change orders, and physical cash vaults
- ✓ Strengthen guest trust with secure, compliant systems
- ✓ Boost team morale by lowering cash transactions and robbery/risk stress

Compliance Made Simple

As more states and municipalities adopt cash-access laws, venues need solutions that keep them compliant without sacrificing efficiency.

Reverse ATMs help you stay ahead by:

- ✓ Offering a legal way for guests to use cash in a cashless venue
- ✓ Supporting ADA and accessibility standards
- ✓ Providing a receipt trail for all transactions

Summary: Are You Security-Ready?

Use this quick test:

Are all cash-handling points audits accurate?

Are employees no longer responsible for handling or transporting cash?

Do you have a way to accept cash customers without handling cash?

Are your payment systems compliant with growing regulatory constraints regarding cashless operations?

If you're unsure, it's time to explore a safer, smarter setup.
